

Power & Versatility Two Brilliant New Amps

YBA-100: A power-up two-channel pre-amp, main amp/speaker combination that features programmed push-button tone selection for instant mood shifts during a performance. Just push one of the buttons for Deep, Mellow or Bright on Channel 1, or use the Cancel button to switch to the triple slide control (separate bass, middle and treble for each channel). Dual channel versatility for bass guitar or other instrument.

Match any instrument with the high and low inputs for each channel, and three extra amplifier outputs let you boost the power to a smashing 400W if you need it.

OCL (output condenser-less) solid state circuitry assures extra years of distortion-free performance and durability.

RA-50: An all-in-one amp for combo or home organ, this compact beauty has its own 2-speed sound-in-motion tremolo, a worldwide favorite in the Yamaha Electones. The speaker actually spins for more vivid living tremolo than a mere moving baffle could hope to equal. For extra stage convenience, use either the foot or (optional) hand tremolo control switch.

Also included: the singing beauty of Yamaha Natural Sound speakers (main and tremolo).

	YBA-100: Pre-amp	Main amp/speaker	RA-50
